

UPDATE:HOW TO CREATE AUTO DATABASE BACKUP

Step 1: Create a folder called backup in xampp

C:\xampp

apache	3/7/2024 1:52 PM	File folder
backup	9/21/2024 9:49 AM	File folder
cgi-bin	3/7/2024 1:54 PM	File folder
contrib	3/7/2024 1:52 PM	File folder

Step 2:Paste the db_backup file in backup folder

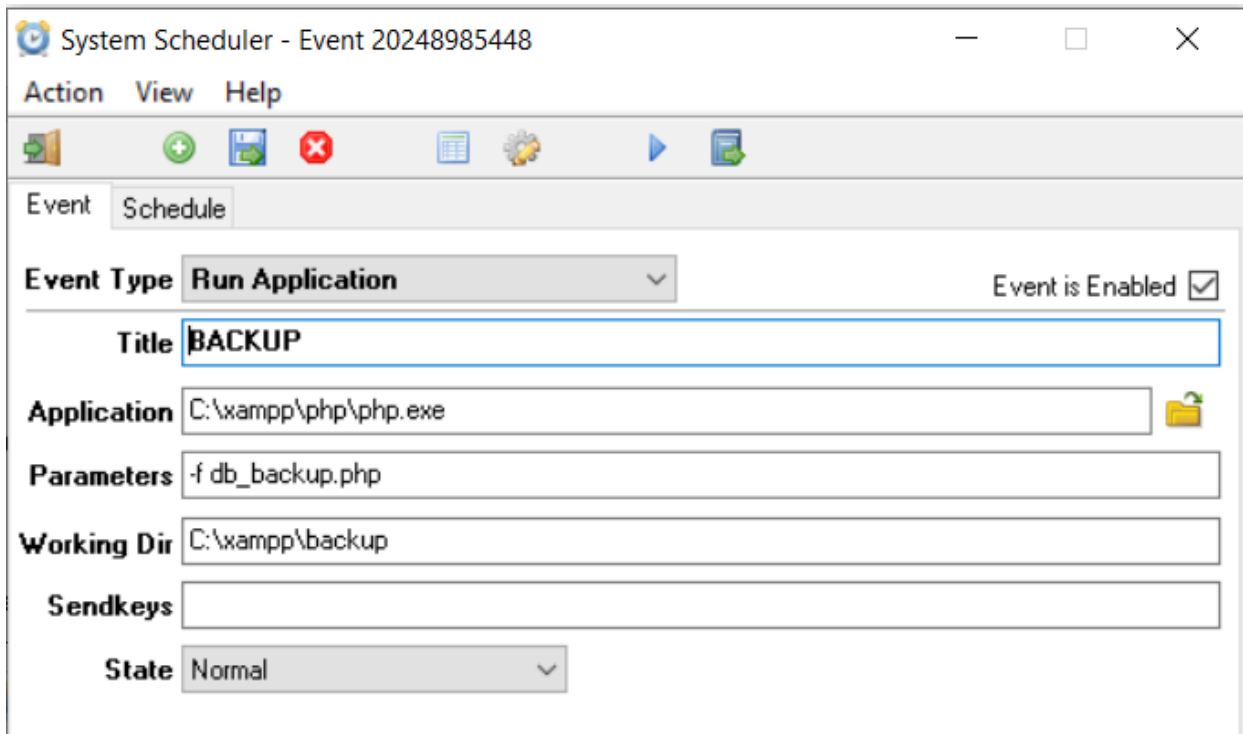

> This PC > Windows (C:) > xampp > backup

Name	Date modified	Type	Size
db_backup	9/18/2024 8:30 AM	PHP Source File	1 KB

Step:3 Open system scheduler app or windows task scheduler

Step:4 :Open the app & press control + N on the keyboard to create new event

Step 5:To set the task see the picture below for guideline

Working dir is the location where the backup file is located

Step 6 To set the frequency at which you want the application to download the backup, click on schedule

Set the frequency to run every minute or every hour:Note: the backup will be replacing the old backup database
